

SAP S/4HANA Migration

MIGRATING TO SAP S/4HANA WITH SUPPORT OF XITING AUTHORIZATIONS MANAGEMENT SUITE (XAMS)!

SAP S/4HANA is the next generation of enterprise software that enables you to do business in real time. This new ERP software suite, which has been specially designed for in-memory computing is based on the innovative HANA database technology. With this in-memory computing you are able, among other things, to connect your business networks, people and big data.

When upgrading to SAP S/4HANA, you need to know that this is a new product from SAP and not an extension of the original ERP software. For this reason, in addition to the system requirements and checking the components you are using, you should also consider your authorizations. In SAP S/4HANA, many transactions are canceled or replaced by new transactions and SAP Fiori apps.

You will see one of the major changes with the introduction of S/4HANA Finance, which is already known as an add-on for ECC systems, but which is mandatory with SAP S/4HANA. It includes many new features, such as the new general ledger, the business partner approach, and the new Central Journal.

These changes require a lot of time and can lead to significant gaps in your authorizations that are difficult to fix without professional support.

In the **Xiting Authorizations Management Suite (XAMS)**, we provide the SAP-published „Simplification List“, which contains a 900-page PDF document. This document provides clear, searchable information about the new features for each application or functional area in a clear way, and includes search functions. This enables you to carry out a reliable effort estimation for the upcoming project. You can also replace old transactions with new ones in your roles with one mouse click and select replacements. Without the XAMS, this would be a manual and thus enormously time consuming procedure.

Our SAP S/4HANA migration service will assist you in successfully implementing the new software suite step by step with the help of XAMS and our extensive experience from other S/4HANA migrations.

XITING WEBINARS

SAP S/4HANA Migration

FAST CHANGE ON S/4HANA LICENSES

The changeover to these many new transactions also requires significant changes to your roles and the associated authorization objects.

As a result, migrating to SAP S/4HANA often requires optimization or even a partial reorganization of your current role concept.

XAMS can help to simplify such a migration.

Benefits of using XAMS:

- Productive test simulation of the new roles on SAP S/4HANA
- Review of new roles on SoD conflicts, critical permissions as well as manual and changed authorization instances
- Correct the problems found in your SAP roles
- Update of the SU24 to SAP S/4HANA
- Checking your own developments to be migrated with overview of security problems
- Configuration of the SAP Fiori interfaces

Our services for a successful migration:

Xiting's services for a successful SAP S/4HANA migration can assist you with a successful migration to S/4HANA or take over the complete service for you. For a complete migration, it is necessary to book the following two services:

Service 1: Can be booked separately SAP HANA Security Readiness Check

- Check Analysis of existing roles and transactions affected by the migration
- Expense estimation of a migration project

Service 2: Only bookable with service 1 SAP S/4HANA Migration Service

- Update of SU24 to SAP S/4HANA including SU25 synchronization

Scenario 1: Brownfield approach

- Presentation of the roles involved and implementation of the necessary adjustments to the role menu to access the target role design in S/4HANA
- Automated SAP S/4HANA role creation based on the results of the analysis

Scenario 2: Greenfield approach

- Evaluation of the ST03N statistics in the ECC system
- Comparison of the ST03N data with the Simplification List from SAP
- Implementation of the new SAP authorization concept based on job-related job functions (job profiles)
- Optimization of the new roles based on the new processes with the help of productive test simulation during further test scenarios

AT A GLANCE:

- Expense estimation of a migration project
- Rapid customization of your SAP roles (Brownfield)
- Implementation of the new SAP authorization concept (Greenfield)
